

Case Study:

Equipment Uptime and Access to Data Resulting In 28-30% Reduction in Costs

Company

A leading food manufacturer/distributor with nearly 100 years in business, the company operates a 2 million square foot facility with a fleet of 214 trucks. They are committed to be efficient and environmentally friendly.

Challenge

Issues with their forklift/mobile equipment maintenance providers led to inoperable forklifts and zero operable AGVs

Solution

With a strong relationship with another plant within this company, Concentric was asked to implement a similar program. This resulted in improved uptime and reduced maintenance costs significantly.

Key Data Points

Average of 20 inoperable forklifts at any given time

All automated guided vehicles (AGVs) non-functional; 16 total

Issues with current equipment maintenance providers

99% equipment availability

All 16 AVGs are fully operational

Average number of out-of-service forklifts is less than 3 of 214
